Apache 2

What Services Depend on Apache2

- php-wiki (slated to be replaced by trac wiki)
- trac
- static web pages (of course)
- mailman
- svn DAV for remote subversion access
- Django-based web site

What Services Depend on Apache1

- sql-ledger
- rt (request tracker - apparently was an experiment)
- mediawiki, phpwiki (these have already been migrated to apache2)
- mailman (has been migrated to apache2)
- server-status (“Location/server-status SetHandler server-status”, allowed from restricted IPs)
- server-info (“Location /server-info SetHandler server-info”, allowed from restricted IPs)
