TuxSoftware

phpwiki

Database

- either Berkeley db4.2 or SQLite
 - likely Berkeley db4.2 as it's a .db4 file
- /var/lib/phpwiki/phpwiki_pagedb.db4

Dump/load commands

- on old tux: `sudo db4.2_dump /var/lib/phpwiki/phpwiki_pagedb.db4 > dumpfile`
- copy dumpfile from old tux to new tux
- on new tux: `sudo rm /var/lib/phpwiki/phpwiki_pagedb.db4`
- on new tux: `sudo db4.2_load /var/lib/phpwiki/phpwiki_pagedb.db4 < dumpfile`
- Check: `sudo db4.2_dump /var/lib/phpwiki/phpwiki_pagedb.db4 | less`
 - should look the same as on old tux
- Check: look at wiki page in browser: [!http://localhost:8080/phpwiki](http://localhost:8080/phpwiki)
 - fails for me - there must be another step to activating phpwiki
 - error is "Not Found The requested URL /wiki was not found on this server." or "Not Found The requested URL /phpwiki was not found on this server."
 - phpwiki seems to work when the url is: [!http://newtux/phpwiki](http://newtux/phpwiki) - but the buttons connect with the wiki on old tux (!)

I guess we can declare that phpwiki works then
