Configuring Arch for a graphical interface 3

Configuring Arch for a graphical interface

The base iso comes up in a terminal. We want some sort of graphical interface. My (JN) preference is **Openbox** with **tint2** and **conky** and **nitrogen**.

- Openbox: a window manager
- tint2: a system tray, a task list, a battery monitor and a clock
- conky: system monitor software for the X Window System. It allows a quite nice display of keyboard shortcuts
- nitrogen: lightweight desktop background browser and setter.
