 PHPWiki Configuration
 --------------------

 Welcome to PHPWiki!

 This is an automated config generator for PHPWiki.  It is not intended to do
 everything, in fact, all it will do is generate a basic, standalone PHPWiki.
It
 is sufficient for simple local installations, but does not encompass all of
 PHPWiki's capabilities.  If you want to use the more advanced features of the
 Wiki, please edit /etc/phpwiki/index.php yourself.

 PHPWiki Document Root
 --------------------

 Where should the web-accessible location of the PHPWiki be?

 This is the directory off your website that people should use to access the
 PHPWiki.  By default, this is http://yourserver/phpwiki, but you can change
it
 to be anything within your server.  Enter just the directory portion below.

 Where should the web-accessible location of the PHPWiki be?

 Access Control
 --------------

 Who should be able to access your PHPWiki?

 A Wiki is normally used to provide unfettered access to information, which
can
 be freely modified by anyone.  Since that is sometimes not what one wants, it
is
 possible to restrict access to the site on the basis of the originating IP
 address.

 If you select 'localhost only', only people on the localhost (the machine the
 Wiki is running on) will be able to connect.  'local network' will allow
people
 on machines in a local network (which you will need to specify) to talk to
the
```

```
Wiki.  'global' will allow anyone, any where, to connect to the Wiki.

For security, this is set to 'localhost only' by default.  Unless you have a
particular need for privacy on your Wiki, you should be able to allow access
globally without compromising site security.

   - localhost only  2. local network  3. global

Who should be able to access your PHPWiki? 3

Purging pages on removal
------------------------

By default, PHPWiki stores all it's pages in a file database in
/var/lib/phpwiki.  Would you like PHPWiki to remove any database files when
you
 remove the package?

Accepting this option will leave you with a tidier system when the PHPWiki
package is removed, but may cause information loss if you have an operational
Wiki that gets removed.

Purge pages on removal? no

Replacing config file /etc/phpwiki/apache.conf with new version
Restarting apache.
Replacing config file /etc/phpwiki/debian-config.php with new version
