sql-ledger runs on HTTPS.

```
/var/lib/postgres  
  
/var/lib/postgres/pg_hda.conf  
  
/home/ledger/doback.sh  
get all of the files in:  
  
/home/ledger/oclug
```

It was placed on /home so that it gets backed up.

It seems that sql-ledger requires apache1? It's running on apache1 now, anyway. Can we migrate it to apache2 so we can get rid of apache1?
