TracAdmin

[\[TracGuideToc\]](#)

Trac is distributed with a powerful command-line configuration tool. This tool can be used to configure and customize your Trac-installation to better fit your needs.

Some of those operations can also be performed via the web interface thanks to the optional [WebAdmin](#) plugin, distributed separately for now.

Usage

You can get a comprehensive list of the available options, commands and sub-commands by invoking ``trac-admin`` with the ``help`` command:

```
trac-admin help
```

Unless you're executing the ``help``, ``about`` or ``version`` sub-commands, you'll need to specify the path to the TracEnvironment that you want to administer as the first argument, for example:

```
trac-admin /path/to/projenv wiki list
```

Interactive Mode

When passing the environment path as the only argument, ``trac-admin`` starts in interactive mode. Commands can then be executed on the selected environment using the prompt, which offers tab-completion (on non-Windows environments, and when the Python ``readline`` module is available) and automatic repetition of the last command issued.

Once you're in interactive mode, you can also get help on specific commands or subsets of commands:

For example, to get an explanation of the ``resync`` command, run:

```
> help resync
```

To get help on all the Wiki-related commands, run:

```
> help wiki
```
